# Parking Guidance Systems

Information Signs

Our information signs with CUR LED-moduls

Information signs with CUR LED-moduls

The information displays are normally used outside to show how many parking spaces are still available and to direct the traffic into the car park. They also use their LED displays to stop vehicles driving into areas or floors of the car park, which are already occupied.

The LED-Module contains the established and approved CUR-LED-Technology including light controls, which continually adapt the signs luminosity to its surroundings.

The signs can be delivered in different types. The standard sizes are 1000 x 600mm (width x height) or 1500 x 1000mm. Other custom-made sizes, colours (RAL) and lettering are at any time realisable.

- for internal and external use
- one and two sided
- optional with background lighting and dimmer switch
- mast or wall mounting
- standard sizes (1000x600 mm), (1500x1000 mm) (WxH) or custom-made
