

UniScan and bars

This information sheet does not replace the original operating instructions!

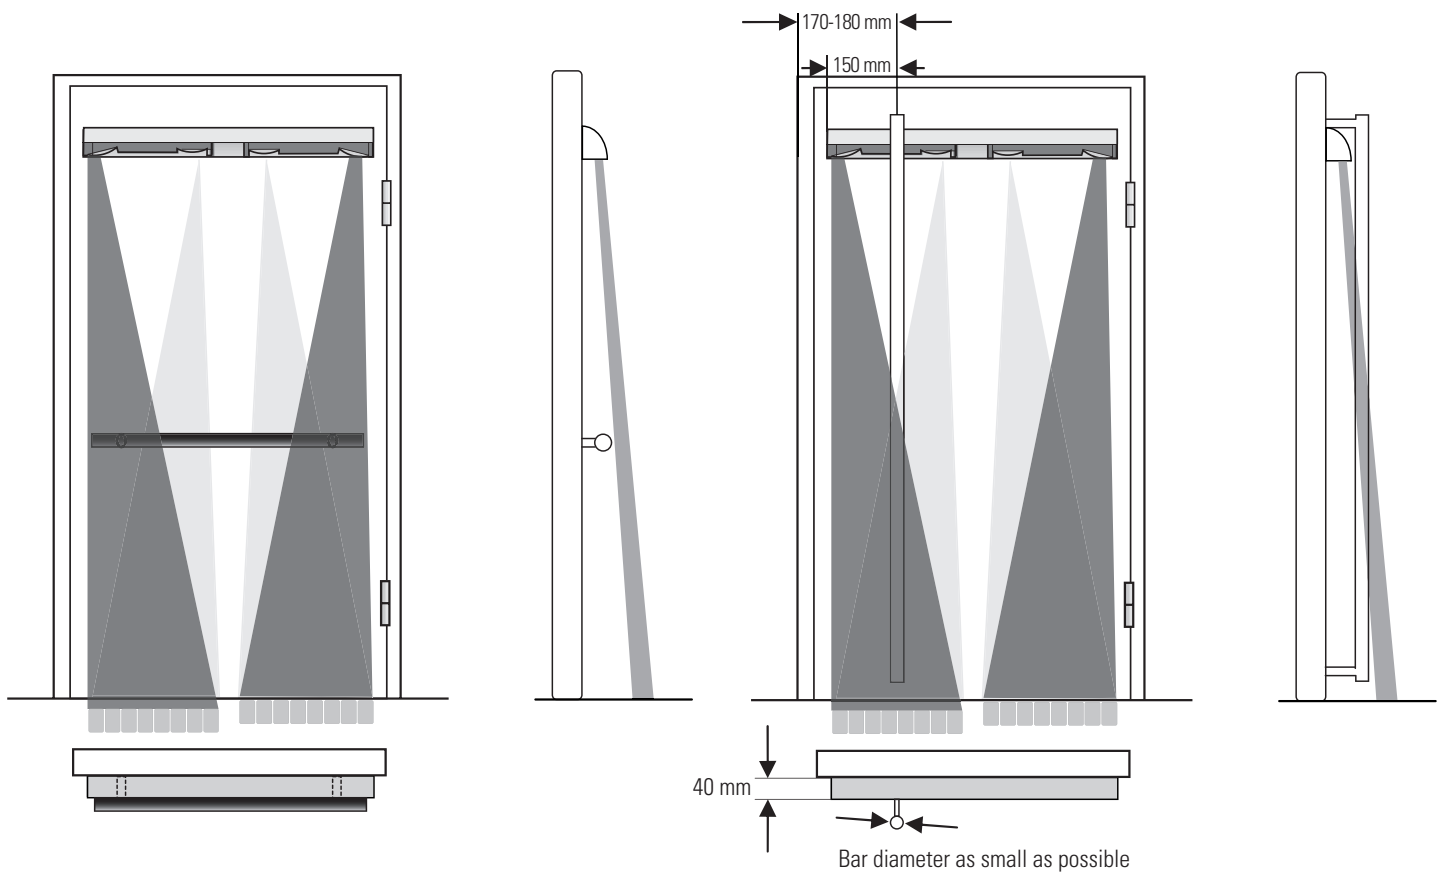

- ! **Read** the operating instructions **before** commissioning the device!
- ◆ Comply with international and national safety regulations!

Bars on automated swing doors

Safety sensors in acc. with DIN 18650: Please note that protection in acc. with DIN always depends on the system. UniScan makes it possible to implement door systems in acc. with DIN 18650. The detector can be set so the light beams shine past the bar. Please check the system using the appropriate test body, in order to guarantee that your doors are protected in acc. with DIN.

UniScan application with horizontal bar as shown in drawing

UniScan application with vertical bar as shown in drawing
