ACCESS CONTROL

Electronic access control refers to the practice of regulating the entrance to a property, a room or a territory to authorized persons.

The access control system can be automatic and based on one manufacturer or it can be integrated as a part of a larger technology network.

SOFTWARE DEVELOPMENT & INTEGRATION

Additionally to its core products, Proxmaster has always engaged in the development of custom-made projects in the field of security system management and integration to suit customers' needs.

Throughout time, Proxmaster has developed a range of solutions for clients whose needs are not fulfilled with standard products.

LICENCE PLATE RECOGNITION

Probably you know that the license plate recognition helps to open gates and barriers automatically.

Likewise, you may also understand that when entering a regulated parking area, the machine automatically issues you a ticket specifically connected to your car's license plate number.

Moreover, if you are a regular user, it might be more convenient for you to receive an accurately calculated monthly bill. Fortunately for you, that is a possibility.
