

EMS-KIOSK 15"

Cashless Indoorterminal

DESCRIPTION

This compact indoor terminal can be installed directly on the wall. The ergonomic design maximizes ease of use and supports consistent, intuitive user interaction via the built-in 15" touch display.

By offering cashless payments only the procurement and handling costs for operators can be reduced to a minimum - refilling and emptying of cash money can be avoided.

Focus on the essentials: User interactions are possible with the large screen with multi-touch technology in combination with the universal QR-reader. After entering the license plate number or scanning the parking ticket, payment can be made conveniently using bank cards or a smartphone wallet. The digital receipt is then available for download via QR scan.

FEATURES

- 15" displayscreen (format 4:3, landscape)
- multi-touchscreen
- cashless payment cardterminal
- QR-scanner
- PC-system
- convenient configuration, evaluation, interaction and remote maintenance via Phoenix Cloud
- dimensions (HxWxD) 594 x 440 x 180 mm
- weight approx. 28 kg
